PROFESSIONAL SUMMARY

Python Backend & AI Integration Engineer with hands-on experience deploying machine learning models, computer vision systems, and LLM-powered workflows into production-ready applications. Skilled in building scalable REST APIs with Flask and integrating AI services such as OpenAI Whisper and Google Gemini. Seeking to bring practical, end-to-end AI and backend engineering experience to a product-focused engineering team.

TECHNICAL SKILLS

Languages: Python, SQL

Backend & APIs: Flask, RESTful APIs, Webhooks, Postman, MySQL

AI / ML: OpenAI Whisper, Google Gemini API, ResNet, Deep Learning, Computer Vision, RAG, Prompt Engineering

Automation & Tools: n8n, FFmpeg, Git, GitHub

Concepts: SDLC, Agile, Data Validation, API Integration

EXPERIENCE

Software Associate — Samcore Technologies

Oct 2025 – Jul 2026

- Engineered and deployed deep learning models (ResNet) wrapped in Flask APIs for real-time inference in client-facing AI applications.
- Built scalable backend services and data processing pipelines in Python and Flask for project-grade AI applications.

Intern — Aerix Nova AI Solution

Apr 2025 – Jun 2025

- Developed AI-driven RESTful backend APIs in Python and Flask, implementing data validation and testing protocols.
- Supported automated workflows to improve system efficiency and data routing reliability.

PROJECTS

TamilVoice — AI Video Subtitler | Flask, OpenAI Whisper, FFmpeg, MySQL github.com/Jaisurya23/AI_video_subtitle_generator

- Built a full-stack Flask app that transcribes, translates, and burns multilingual subtitles onto videos — a 2-minute video is fully processed and translated into Tamil and Hindi in under 3 minutes.
- Added user authentication, processing history, and an admin dashboard backed by MySQL.

AI Stock Research Platform | Flask, yfinance API, Google Gemini github.com/Jaisurya23/ai-stock-research-platform

- Built a financial analysis platform that replaces manual research with a single click, auto-generating key metrics (P/E ratio, company size) and a rule-based bullish/bearish outlook for the next 3 years.
- Added news sentiment analysis via web scraping to enrich reports with real-time market context.

AI Sales Assistant — RAG Chatbot | n8n, Retrieval-Augmented Generation

- Built an automated n8n pipeline powering a RAG chatbot that handles product inquiries and captures leads, replacing manual entry with an always-on response system.

YOLO + ResNet Multi-Detection System | Python, YOLO, ResNet, Deep Learning

- Built a multi-model detection system using YOLO for real-time object detection and ResNet for currency and face recognition, with real-time audio output.

EDUCATION

SRM University — Master of Computer Application (Online MCA)

Expected 2027

Bishop Heber College, Trichy — Bachelor of Computer Applications (BCA)

2025 | CGPA: 7.25

Government Higher Secondary School, Valayapatti — 12th Standard

2022 | 77%

CERTIFICATIONS

- Python Programming for Beginners — Udemy
- Introduction to Artificial Intelligence — LinkedIn
